

Functional programming

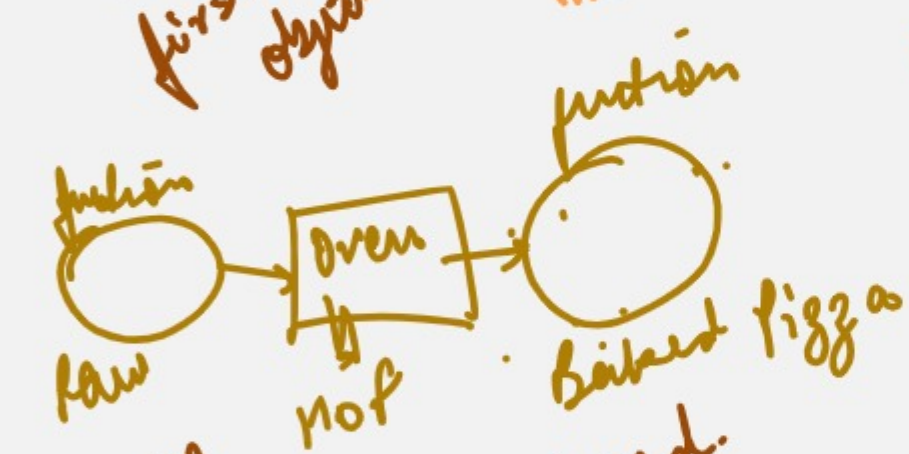

develop logic & program in functions

- use pure functions
- currying M3 → alt. of for loops
- Expression oriented
- Immutable → can't be changed
- String

placing a function as value

- Arguments
- Parameters
- functions are first class objects
- function definition → function expression

mutable & can be changed

- Why FP?
- modularity & structured
 - Reusability
 - Testing (pure functions)
 - Scalability

Debugging (Debug)
 JS errors
 Debug → implement
 Error → HTML & CSS

- In Browser
- outside Browser

- why?
- code not working
 - error is coming
 - How App (code)

HTML & JS
 Debugging implement M2 C2

Debugging via JS

- console.log()
- Breakpoints
- Debugger
- pause
